AutoCAD LT is primarily intended to run on low-end, low-cost computing platforms like personal computers, tablet computers and smartphones. There are AutoCAD and AutoCAD LT, as well as the latest addition to the family, AutoCAD LT for Windows, macOS and Linux. AutoCAD and AutoCAD LT are referred to in this article as AutoCAD. AutoCAD has a reputation for being somewhat difficult to learn, but with a bit of practice, you can be a productive AutoCAD user in no time. Supported Operating Systems AutoCAD is a very widely-used and versatile application. AutoCAD can operate on any computer running Microsoft Windows, macOS, Linux or UNIX operating systems. The application can also run on UNIX-based operating systems including macOS (on Unix-based Mac computers), Linux (on Unix-based Linux computers) and AIX (on IBM Power systems). The application can run on any 64-bit version of Windows 7 or later, Windows 10, Windows Server 2008 or Windows Server 2012 or Windows Server 2016 or later. The aim of this study was to compare the effects of the first-time pregnancy and the subsequent pregnancy rate after laparoscopic versus laparotomy tubal sterilization. A prospective, randomized, non-blinded, multicenter study was performed in women undergoing tubal sterilization for the first time. Women were randomized to either laparotomy (n = 97) or laparoscopy (n = 94) for the first operation. Women with a previous cesarean section or those with a tubal disease were excluded. Follow-up was performed by personal interview and questionnaires. Data were compared using the chi(2) test and student's t-test. A first-time pregnancy occurred in 28.9% of the laparotomy group and in 27.7% of the laparoscopy group. Eighteen women (12 in the laparotomy and six in the laparoscopy group) conceived after sterilization. A second-time pregnancy occurred in 40% of the lap a1d647c40b

Nearly 3 million houses and apartments in British Columbia have lead service lines in their plumbing systems, which run from the house into the municipal sewer system. It's considered the single largest source of lead in the province. When lead is present in the pipes it can be particularly harmful to children, who are more susceptible to lead poisoning. The Canadian Paediatric Society has recommended against the use of household plumbing for young children. The UBC-led research project is aimed at developing more efficient ways to detect lead in household plumbing systems, so that public health officials can find lead-contaminated homes and homes that could be at risk. "This is a global problem that's out there and we haven't been successful in controlling it," said Dr. Chris Bolton, a UBC chemical engineering professor who is overseeing the project. "We're going to do our best to close the loop on lead exposure." Initially, the \$7 million lab will focus on the
