A team of Swedish hunters has bagged a 400-year-old polar bear after successfully tracking the animal down on ice in the Arctic circle. The successful hunt was carried out by the Sea Shepherd Conservation Society, an international organisation that fights poaching in the world's oceans. The group, which has been described as a 'eco-pirate' group by some of its opponents, told MailOnline that the bear had been deemed 'ethically killed'. "I would go out there and say this is a good bear. You're killing it for fun and profit," Sea Shepherd's conservation director Jonathan Chase told The Associated Press. Fears are growing that polar bears are losing their grip on their frozen habitat, with environmental organisations declaring it 'game over' for the species. A team of Swedish hunters has bagged a 400-year-old polar bear after successfully tracking the animal down on ice in the Arctic circle It was a great bear – the oldest bear in the world, the oldest polar bear in the world and it's actually giving birth to cubs in the middle of the Arctic Ocean," Mr Chase said. But it is not the first time that the hunters have managed to find the bear. In 2012, the group found a bear under a large hole in the ice, and estimated it would have been 500 years old. It is not known whether the bear survived. 'A bear's a bear, even if it's old,' Mr Chase told the AP. 'You know, it's not a time bomb or anything. It's a bear. You know it's going to die.' Polar bears are known for using special fat stores in their body to survive in temperatures that can drop below minus 60 degrees Celsius. Fears are growing that polar bears are losing their grip on their frozen habitat, with environmental organisations declaring it 'game over' for the species Polar bears can weigh up to 1,000 pounds, and have been known to live up to 20 years in the wild. But rising temperatures have led to the melting of the ice at their habitat, leading to the bears becoming more desperate for food. 'At the moment we're really, really worried. The entire world is worried. Because it is not a matter of years anymore, but the polar bears have already lost,' said Katarina Byström, a researcher at
