DBEdit is a plugin for Eclipse designed to help you explore databases, edit tables directly with a spreadsheet like editor, edit SQL and more. Database Explorer Plug-in Description: When I first looked into Eclipse Database Tools I was thinking, "Man, I wish I didn't have to make multiple database connections to multiple databases on my computer. Then I thought, "Boy, I bet this can be done in a different way. Indy DB Plugin for Eclipse Description: EclipseDB is an open source database connectivity framework for the Eclipse platform. It is an implementation of the Java Database Connectivity (JDBC) API

which includes a database driver, objects, and other classes to facilitate the development of Java based applications that access one or more databases. " and " I would prefer to keep the " parts. A: Quick and dirty way is to use regex to remove spaces after the closing bracket. `^(.*\r?)(\r?)(.*)$`
Working example online: Alternatively use a regular expression to find and replace (from text file to text file). There are plenty of options, but one of the simplest would be: `(?m) (.*\r?) (.*) (?=`
Note: This is not a fantastic solution if your text file contains many line breaks (as if the are not properly converted to new lines). ES News email The latest headlines in your inbox twice a day Monday - Friday plus breaking news

Former Labour MP Harriet Harman is
being urged to attend a meeting
organised by the Women's Equality
Party on how to combat misogyny and
misogyny in politics. The group, whose
candidates are campaigning to be
Labour's first MPs since Harriet Harman
stood down as an MP

What's New In DBEdit Plugin For Eclipse?

DBEdit is a plugin for Eclipse designed to help you explore databases, edit tables directly with a spreadsheet like editor, edit SQL and more. DBEdit is based on the Virtual OpenRowSet extension for Eclipse RCP, so all the information shown in the standard JPA debug view is also provided in DBEdit as well as table headers (when hovering) and virtual tables. Both the Table Manager and the SQL View available in the standard JPA debug view can be used in DBEdit. DBEdit is designed to be the first step in creating a database with DBEdit so that you have the most convenient way to manipulate data coming from your

database. It includes integrated support for the following databases: MS SQL Server, MySQL, Oracle and PostgreSQL DBEdit is based on the Virtual OpenRowSet extension for Eclipse RCP, so all the information shown in the standard JPA debug view is also provided in DBEdit as well as table headers (when hovering) and virtual tables.
