! The history of the Soviet machine gun 29117 Ausstellungskatalog Do. 2019 e96_Machzehn_cover And we are already intoxicated! Are we not proud of our endless supply of arms? (Aleksei Novikov - 1837) During the era of military reforms at the beginning of the 20th century, machine guns, in their original version, did not seem to be suitable for military purposes. A report on the issue of the Zuein 20 in the Ministry of

War confirmed the opinion that machine guns, although reliable and well developed, were mainly unsuitable for military use. But this assessment was out of date. Another report from the same moment mentions to the “wide deployment of [...] machine guns” already in 1908. Instead of machine guns, it was long wanted to fill gaps with automatic rifles. The picture of the so called Minnstrel (which later was called also Great Sharpshooter) has already entered in people’s memory. However, it was said about it that “if you already have a machine gun on a carrier, you might as well also have an automatic rifle”. But only one year later, it was set in motion: At the beginning of 1911, the Turkish industry intended to entrust (after the Turkish army successes against the Armenian insurgents) the foreign production of 25 machine guns on loan to Turkey. The first complete production machine gun was established in 1911. The “Rubin” [sic!] machine gun - developed from an Italian machine gun model passed on in 1908 - was a machine gun with a drum for a hundred-round ammunition feeding. In this case, one barrel had to be loaded before the other, but each barrel had its own breech block - charges in this case were also loaded for each barrel by the user, so regardless of type of machine gun, loading was one and the same operation. The machine gun was

produced by Anatoli Rubin's production organization. Even the Germans have begun to order, and bought in Russia. Rubin machine gun ready for combat use Alexander Abramovich Moiseev... .. founded a machine gun production unit in Novosibirsk (here: city on Ob and Urals rivers) in 1924, equipped with several 100s of these machine guns, which he named "Mosin-nagant" (Mosin = "a

Speech Recognized - The game features an in-game speech recognition system that allows you to move around and perform other actions without having to continuously use the touchpad to navigate through the game. Great Level of Detail- All worlds are hand-made, allowing developers to make the best use of what the powerful HTC Vive and Oculus Rift are capable of, immersing the player in a living, breathing environment. Natural Locomotion - The game is designed to be played with natural locomotion, allowing for realistic movement in the world, and being able to interact with objects on the ground, as well as pick them up and throw them at your enemies. Dynamic Camera - The game uses unique camera system that only works in virtual reality, moving with

the player, forcing players to look all around when they are moving by holding their arms out. Beautiful Graphics - The game features an advanced 2.5D and light-field rendering technique that lets you experience the world with a low poly, yet crisp and detailed look. Complex Combat System - Combat is one of the main features of the game as it allows for quick and deadly hand-to-hand fights between two heroes, using swords, axes, bows, shields and magic to defeat their opponents. Jumping and Bouncing System - Playing in a world where the ground is literally everywhere, and by simply jumping you can move from place to place, requires the player to be able to jump and bounce off objects in the virtual environment. Full Controller Support- The game was built for console users, being controller only, however, since the game is PC-only, there is no way to force the user to use a gamepad. To accommodate the console players, a optional mode for the game can be easily added which will simulate the controller input with either the wands or the head tracking system. Full Inventory Management- All weapons, armor, and inventory items are stored in a central chest inventory and shown in a full-screen interactive grid. The player can move items around, put them in a pile or stack them around the world; they are all stored there for you to use in the world. Hostilities- Control multiple characters

at once during battle. Level up and buff your characters until you can defeat them, or play to the end. Mastery- Collect every NPC, weapon, item and enemy in the game, increasing your mastery each time. The more you collect, the more powerful you become. 3D Music
