embroidery studio e3Q: How
to pause the thread and
return to the thread in C++?
I have two threads: thread_1
and thread_2. I would like to
block the execution of

thread_2 until I finish some business with thread_1. When I finish my business, I want to return to the execution of thread_2 without stopping it. How do I block and return to thread_2 execution? A: I'm not sure I understand the question but it sounds like you're asking if it's possible to create a deadlock between two different threads. (I assume that you mean threads inside a single process... if you

mean that they're running in different processes, you should start the new thread from the main thread of the old thread.) In this case, threads and processes are roughly equivalent. A process owns all of its threads. A thread is contained in the process. A process can only contain one thread. If thread_1 is deadlocked, then any other thread needs to wait for thread_1 to finish. Since you can't interrupt

another thread, the only way you can interrupt thread_1 from the other thread is to switch the thread that owns the thread_1 so that it creates a new thread that owns the deadlocked thread_1. It would look something like this:

```
void startThread_2() { while (true) { // busy loop } } void thread_1() { while (true) { // busy loop } } int main() { startThread_1(); startThread_2();
```

```
startThread_1();  
waitThread_2(); thread_1(); //  
post-mortem thread_1 stuff  
here. return 0; } If you want  
to have a cleaner interface,  
then you could make a  
thread manager class that  
lets you queue threads and  
then start them all at once.
```
