Just downloaded this app and it's not working out too good so far. I turned livesync on and placed the model from Revit to Lumion. When I move/change elements in my Revit Rendering Model, it changes in Lumion, which is good. BUT, my Revit Rendering Model has other Revit models linked to it. Sometimes I need to modify elements in those linked models, so I do that. Then I reload links in the Rendering Model so those changes reflect, which then automatically updates in Lumion. This works, but when I do that step ALL the material changes I've made in Lumion disappear and the Revit model materials are back. I am not renaming any materials in Revit anymore, so I don't know why it would erase all material changes I made in Lumion. This issue is defeating the purpose of using LiveSync. Not sure what I'm doing wrong. Autodesk provides download and install instructions both for individuals and for administrators. Individuals should sign into their Autodesk Account or education site.
